# AA-5 to Crystal Set 

Al Klase - N3FRQ
2 October 2022

## The Mission

- Build a good crystal set with parts salvaged from an All-AmericanFive radio.
- There's lots of these around, and the distressed ones are often free for the taking.
- We'll reuse the two-section variable capacitor and ferrite antenna rod for our tuned circuit.
- We'll repurpose the output transformer to enable the use of some dollar-store earbuds. (These are often quite sensitive due to their rare-earth magnets but require impedance matching for use in a crystal set.)

## You can do this!

## Our Victim

## Our Victim

## Schematic Diagram

## The "Benny" Resistor

- Pointed out by the late Ben Tongue, captain-of-industry, electrical engineer and crystal-set maven.
- The DC resistance of a matching transform primary is much smaller that the AC impedance.
- The heavy DC load on the diode detector causes distortion and loss, espcilally on strong signals.
- Bypassed resistor in series with the primary solves the problem.

## Pictorial

Added Secondary

## Detail

This wire comes from The left-hand end of the antenna rod.

Ground Terminal

Antenna Terminal

Capacitor Frame Not Grounded
This wire comes from The right-hand end of the antenna rod.

40-turn scramblewound secondary Polarity not important ose \#30 magnet wire in this case.

## An Alternative Circuit

In the case where you can easily add a center-tap to the existing antenna coil this similar circuit can be utilized.

## Output Transformer

- 0.1 VAC I KHz on secondary -> 1.7 VAC on primary
- Therefore: turns ratio $=1.7 \div 0.1=17$
- Impedance transformation = 17 squared $=289$
- This is consistent with assuming the transformer provided a 2500 ohm load to the 50C5 plate (see tube manual) and transformed it to 8 -ohms for the speaker.
- So: 67 -ohm earbuds look like $289 \times 67=19,363$ ohms

## Log

AA-5 Crystal Set - Jersey City, NJ - Low 100-foot antenna.

|  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| FREQ | CALL | PWR | DX -Miles | Sterngth |
| 1280 | WADO | $50 \mathrm{k} / 7.2$ | 7 | Weak |
| 1190 | WLIB | $10 \mathrm{~K} / 30 \mathrm{~K}$ | 4.9 | Weak |
| 1130 | WBBR | $50 \mathrm{k} / 7.2$ | 6.1 | OK |
| 1010 | WINS | 50 K | 5.2 | OK |
| 820 | WNYC | $10 \mathrm{~K} / 1 \mathrm{~K}$ | 2.5 | Very Strong |
| 770 | WABC | 50 K | 13 | OK |
| 710 | WOR | 50 K | 4.9 | OK |
| 620 | WSNR | $2 K / 7.6 K$ | 5.2 | OK |
| 570 | WMCA | $5 K$ | 2.5 | OK |
